

aspen pittman  
designs

Aspen Pittman's designs have been coveted by legendary musicians and record producers for over 40 years. Aspen's best selling Tube Amp Book has sold over 140,000 copies. He has designed dozens of award winning tube guitar amps, stage and studio microphones, and built over a dozen unique electron vacuum tube designs from scratch.

Aspen's patented inventions, such as the Speaker Emulator, changed the way we record guitar, and his Center Point Stereo technology will forever change the way we produce live music. Aspen's audio designs have earned multiple utility patents both in the USA and around the world, and have garnered top awards in multiple fields including the prestigious TEC award for best microphone design.

So it seemed fitting to brand his new company simply, **aspen pittman designs**.

### Center Point Stereo - Stereo Everywhere! The Spacestation v.3 and new Spacestation XL

Aspen's CPS stereo powered monitors are the only effective stereo speaker technology capable of creating a 3D 'beyond stereo' image throughout the venue (300° dispersion!) and all from a single speaker. CPS must be heard to be believed!

The perfect partner for all stereo keyboards, stereo guitar processors, and for stereo based vocals. Add a mixer, and CPS monitors can support the whole band, serving as both mains and monitor system. The band and audience hear exactly the same mix in big 3D stereo ... no matter where they are!

Choose the groundbreaking SS3 compact 32lb marvel that delivers 106+dB SPL for small to medium venues, and has set the audio world on it's ear since it's introduction. Or if you need 'more', the new SXL at twice the size and power with a frequency response from 50Hz to 20KHz (no Sub required) for those larger and louder venues. The SXL also has two independent channels so players using two keyboards won't need a mixer.

### The DT1

Aspen's unique "Dual Top" design is a Hi-Def condenser microphone perfect for stage or studio, voice or instrument, delivering incredible detail and his signature warm vocal tone. Or you can unscrew the foam cushioned top and it is the perfect choice for virtually every instrument application!

### The PFM and PFM+

Aspen's acoustically transparent louvered steel mesh pop filter redirects the vocalist's air eliminating the "plosives," safeguarding studio vocal tracks. The PFM easily attaches magnetically to any shock mount with a steel core (as most have), but also comes with a mating steel XL jam ring for use with any gooseneck.

### The Duo Tonic guitar tone pedal

Aspen's newest design for the guitarist combines a classically voiced "two pentode" all tube high gain channel that has a full range of tone and timbre controls, as well as two vintage inspired SS overdrive circuits. Dual OD options driving a dual tube gain channel provides a Duo Tonic for reviving your tone!
